QUIEN SOY

- Co Fundador de Kronoscode
- Project Manager
- Programador Frontend

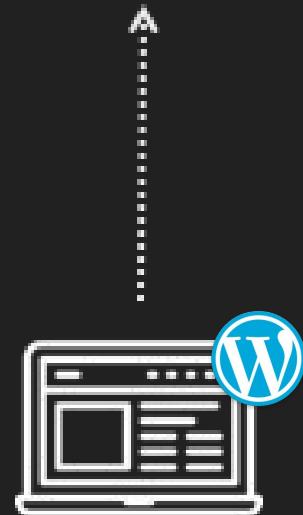

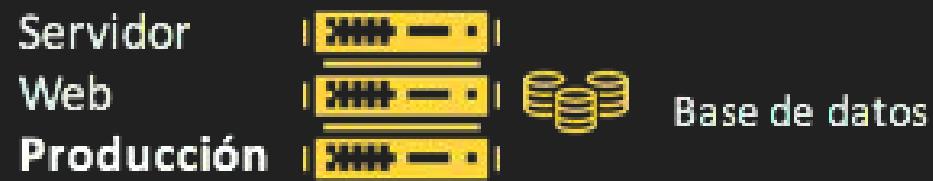

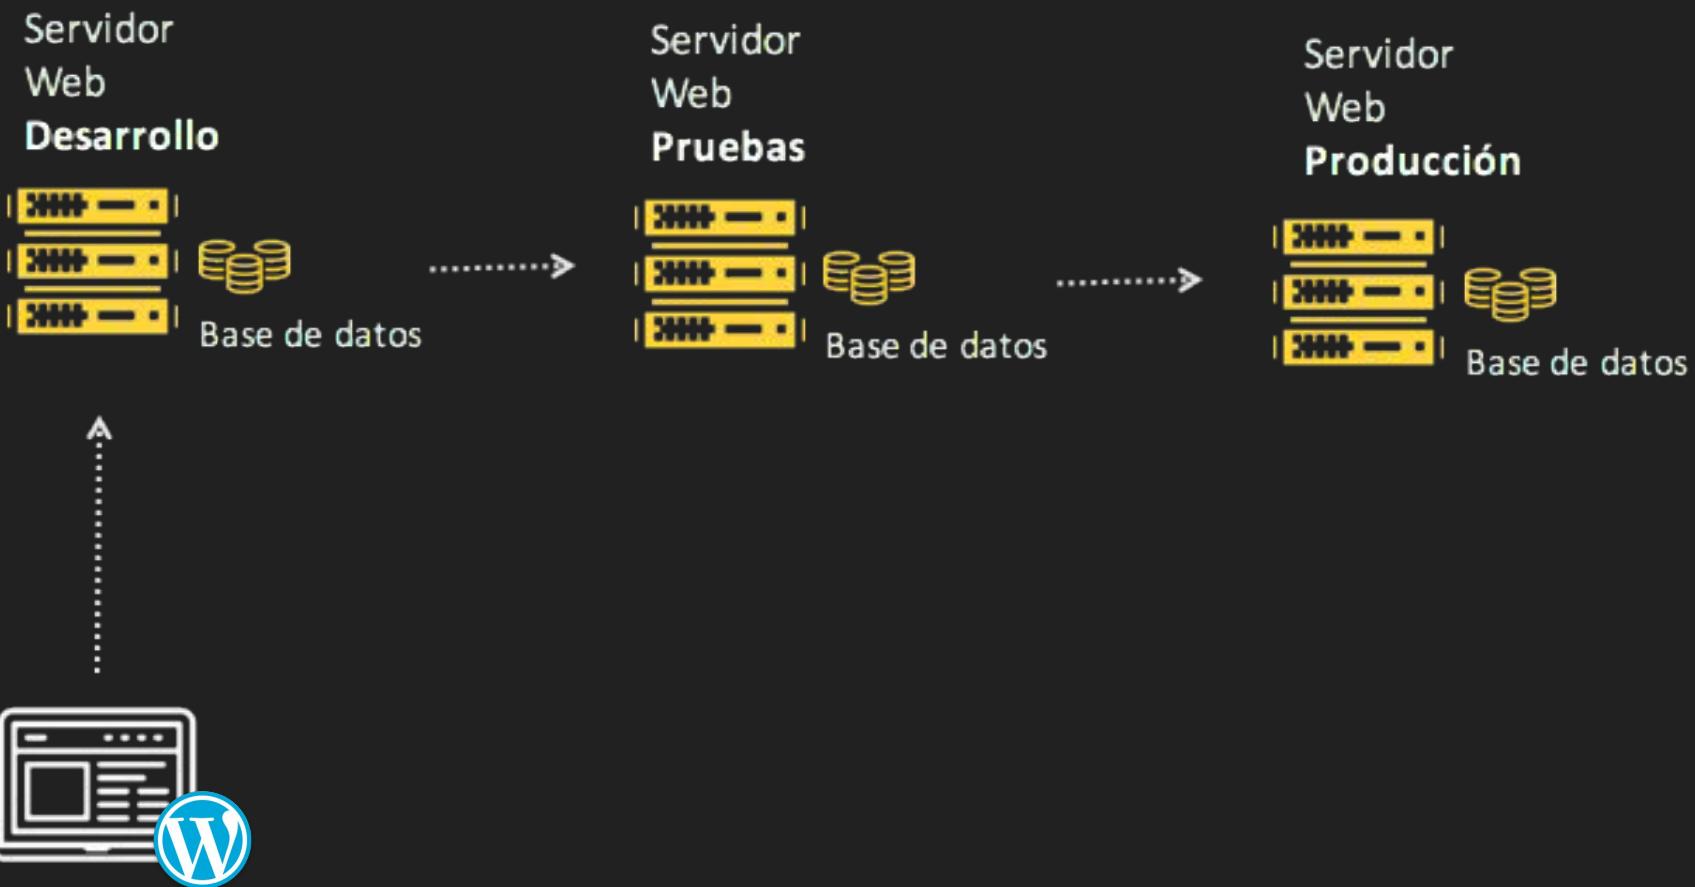

EL CONCEPTO DE TRABAJAR EN LA NUBE

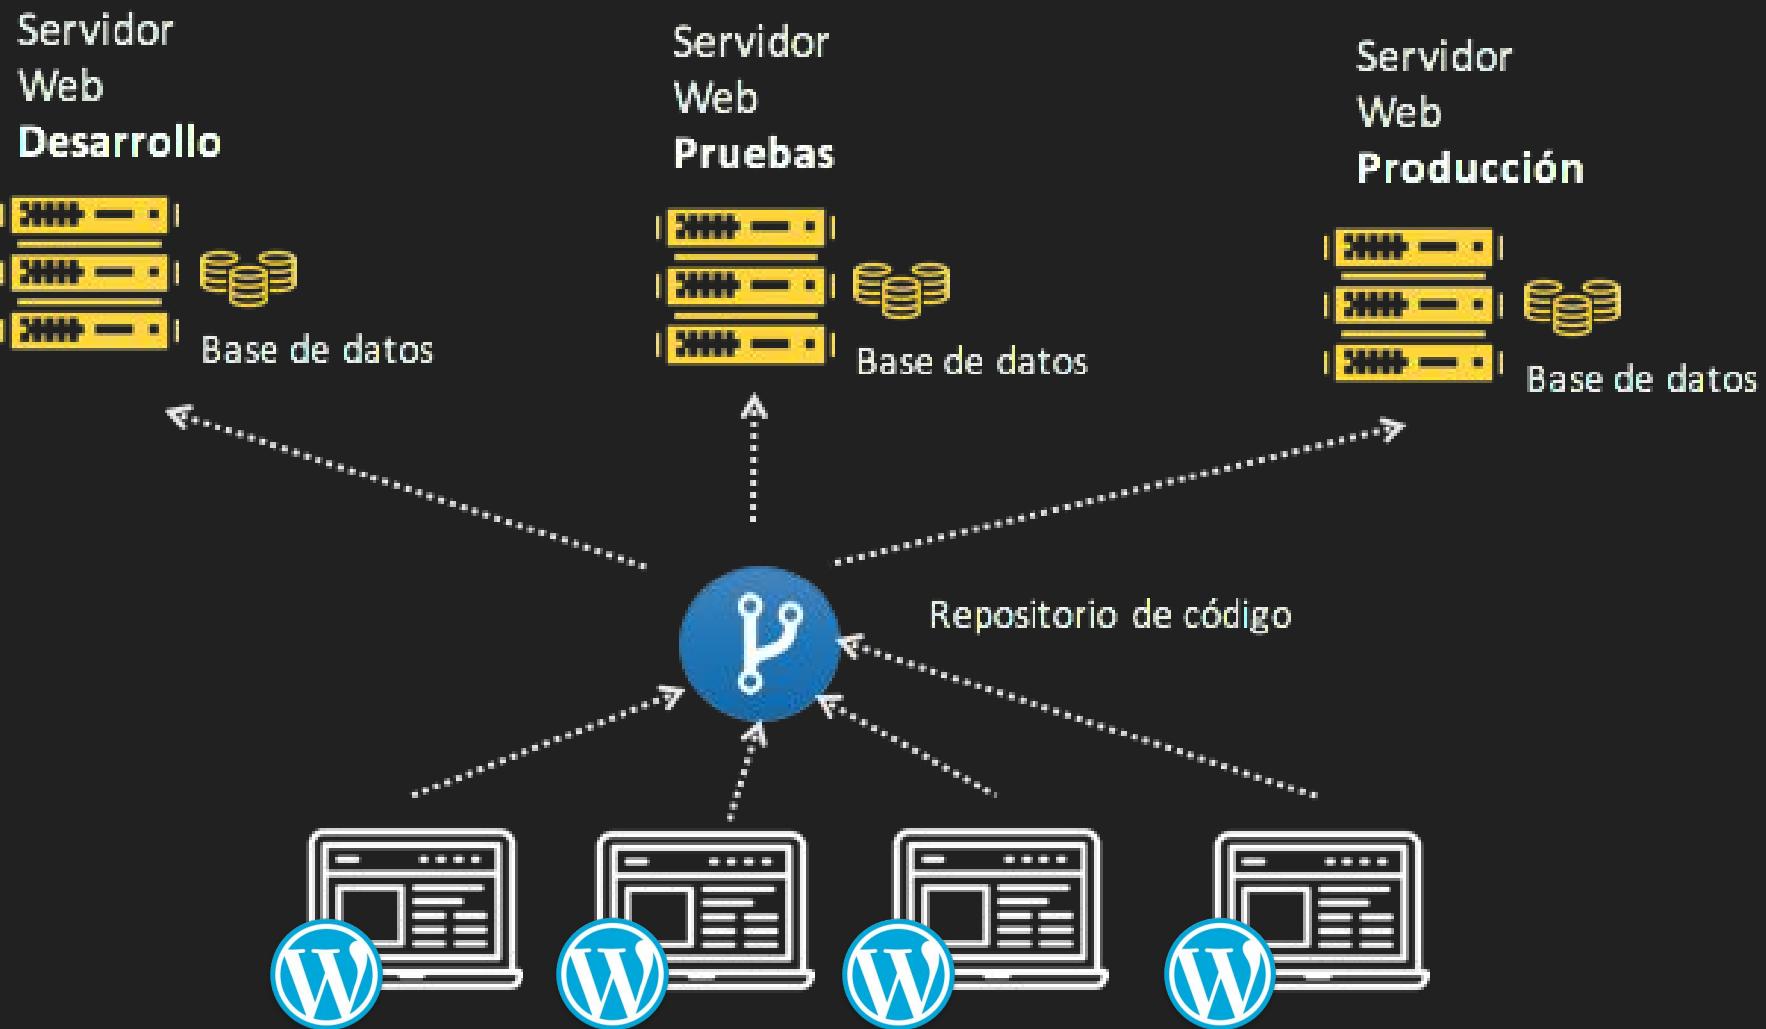

EMAIL	Gmail, Yahoo, Outlook
Documento	Dropbox, Google Drive, Office 365
Media	Google Photos, Facebook, iCloud

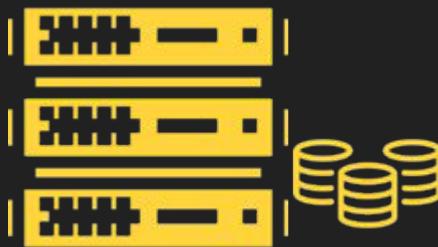

Instancia de desarrollo

Servidor de producción

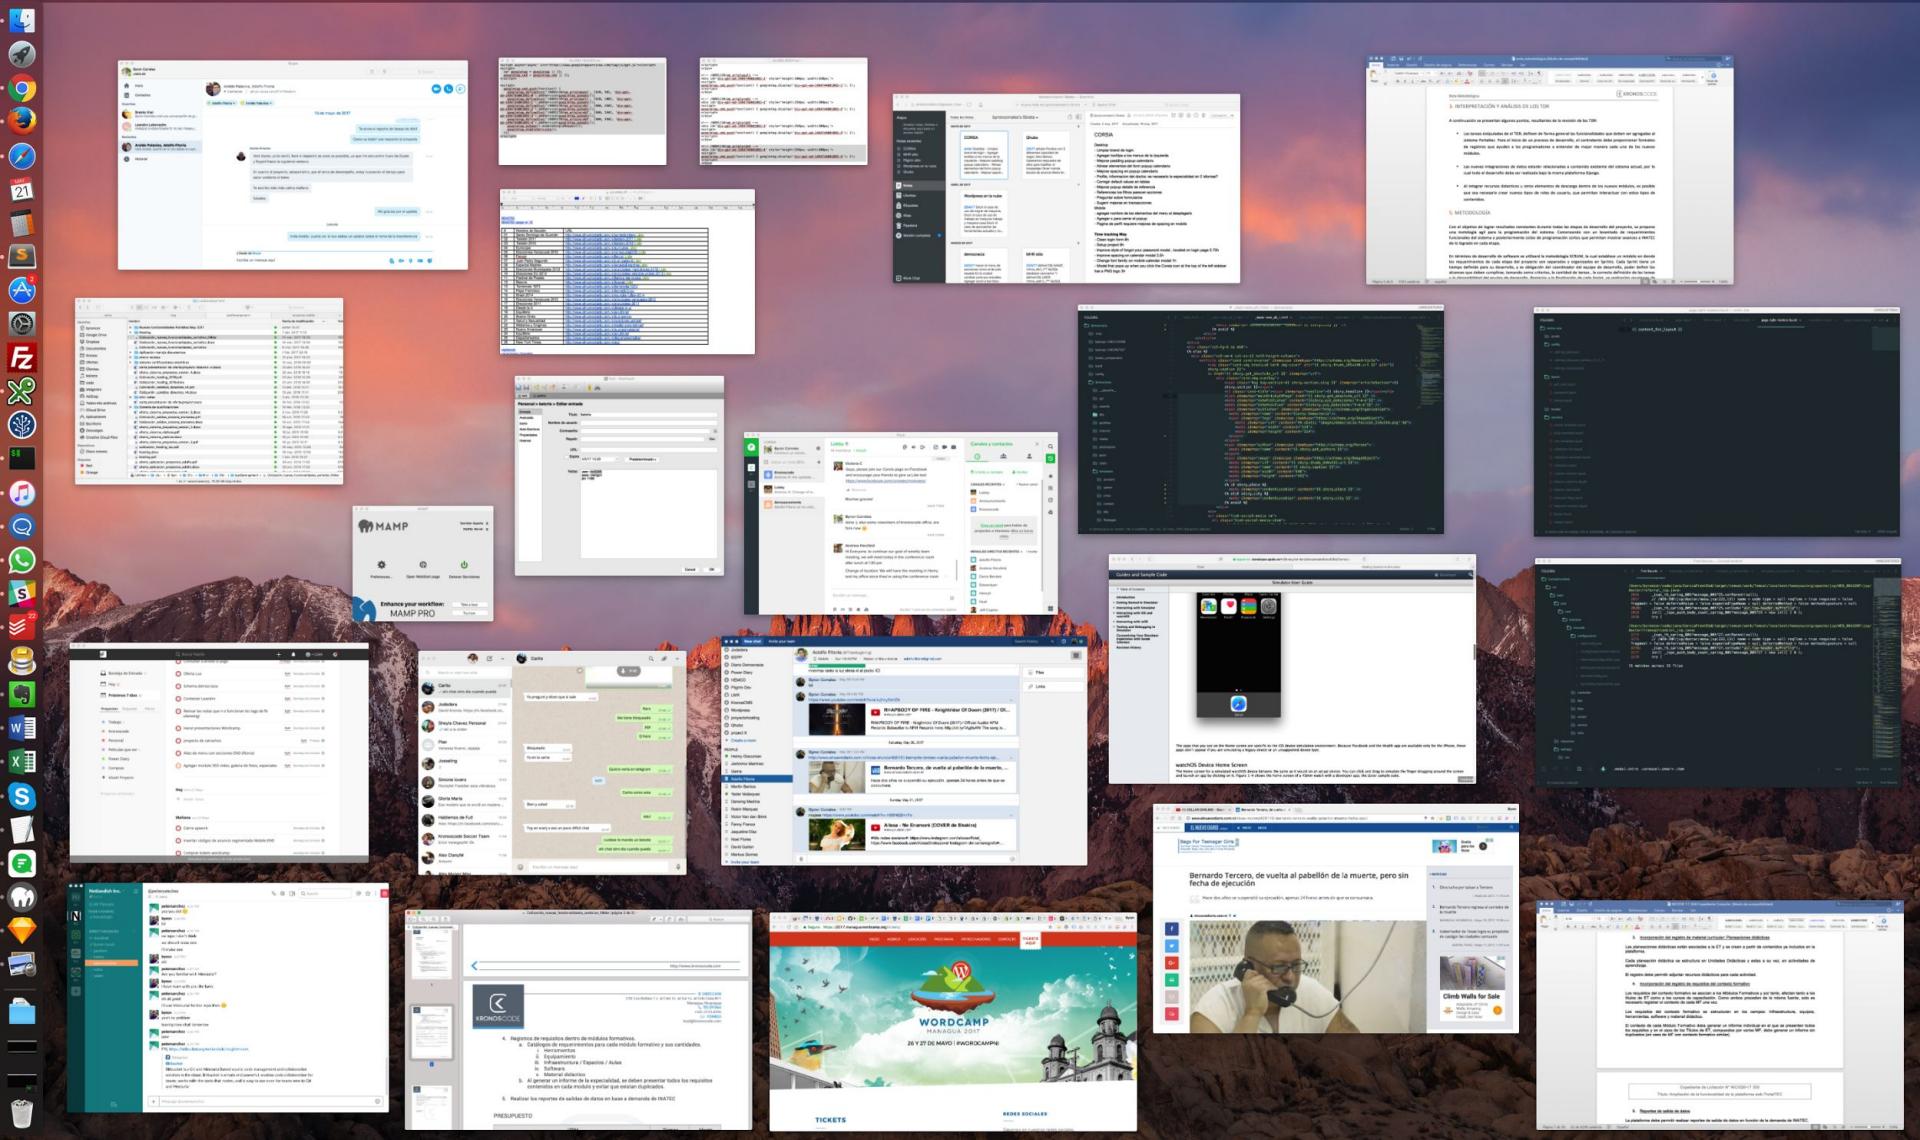

VENTAJAS

Libertad de trabajar
desde cualquier
dispositivo

VENTAJAS

Menor espacio de disco y recursos de memoria de estación de trabajo

GULP

REDIS

MYSQL

APACHE

POSTGRESQL

VENTAJAS

No pasa nada si pierdes tus datos

Ooops, your files have been encrypted!

What Happened to My Computer?

Your important files are encrypted.

Many of your documents, photos, videos, databases and other files are no longer accessible because they have been encrypted. Maybe you are busy looking for a way to recover your files, but do not waste your time. Nobody can recover your files without our decryption service.

Can I Recover My Files?

Sure. We guarantee that you can recover all your files safely and easily. But you have not so enough time.

You can decrypt some of your files for free. Try now by clicking <Decrypt>. But if you want to decrypt all your files, you need to pay.

You only have 3 days to submit the payment. After that the price will be doubled. Also, if you don't pay in 7 days, you won't be able to recover your files forever.

We will have free events for users who are so poor that they couldn't pay in 6 months.

How Do I Pay?

Payment is accepted in Bitcoin only. For more information, click <About bitcoin>. Please check the current price of Bitcoin and buy some bitcoins. For more information, click <How to buy bitcoins>.

And send the correct amount to the address specified in this window.

After your payment, click <Check Payment>. Best time to check: 9:00am - 11:00am

VENTAJAS

- Disminución de tiempos de configuración
- Compartir ambientes de desarrollo con otros programadores
- Poder compartir rápidamente una url demo de tu proyecto.

DESVENTAJAS

S

- Dependencia de internet.
- Estabilidad de conexión.
- Puede existir complicaciones en proyectos que demandan muchas configuraciones o dependencias
- No apto para programadores que les gusta controlar todo.

An Experience Designed for You

Over 60 million people choose WordPress to power their websites and blogs. Born out of a desire for an elegant personal publishing system built on PHP and MySQL, its potential has evolved to a full content management system.

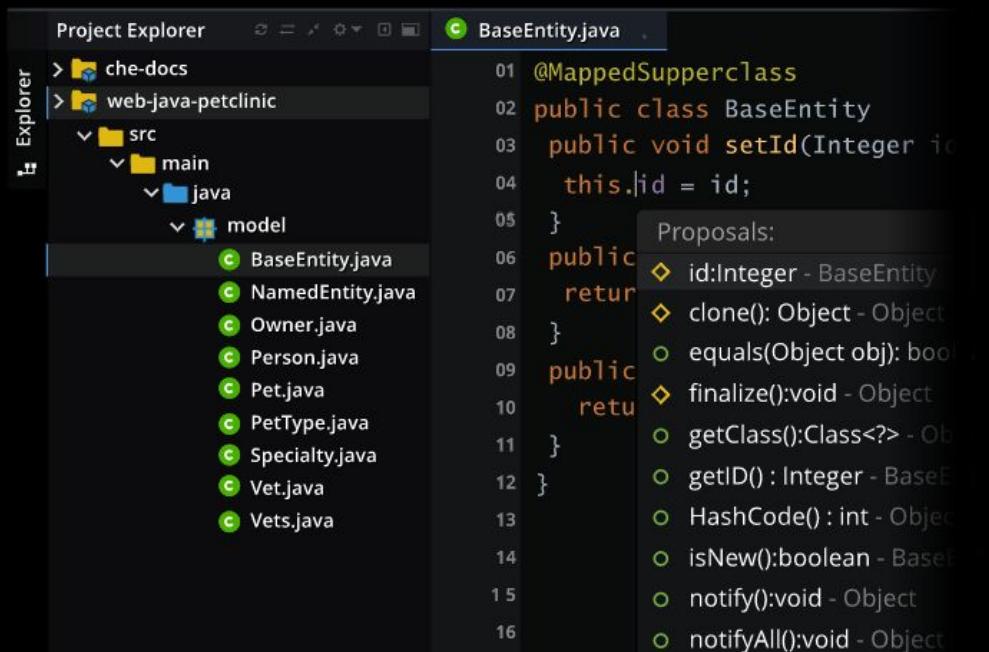

Ubuntu 16.04 Apache MySQL PHP WordPress

- Conectarse al servidor via SSH
- Edición de código con, nano o vim
- Transferencia de datos por scp o rsync
- Control de versiones de código GIT

CLOUD WORKSPACES FOR DEV TEAMS

Develop code with portable Docker runtimes. Workspaces “dev mode” production adding intellisense, debuggers and desktop sync. Create teams for sharing at codenvy.io or in a private install.

[GET STARTED](#)

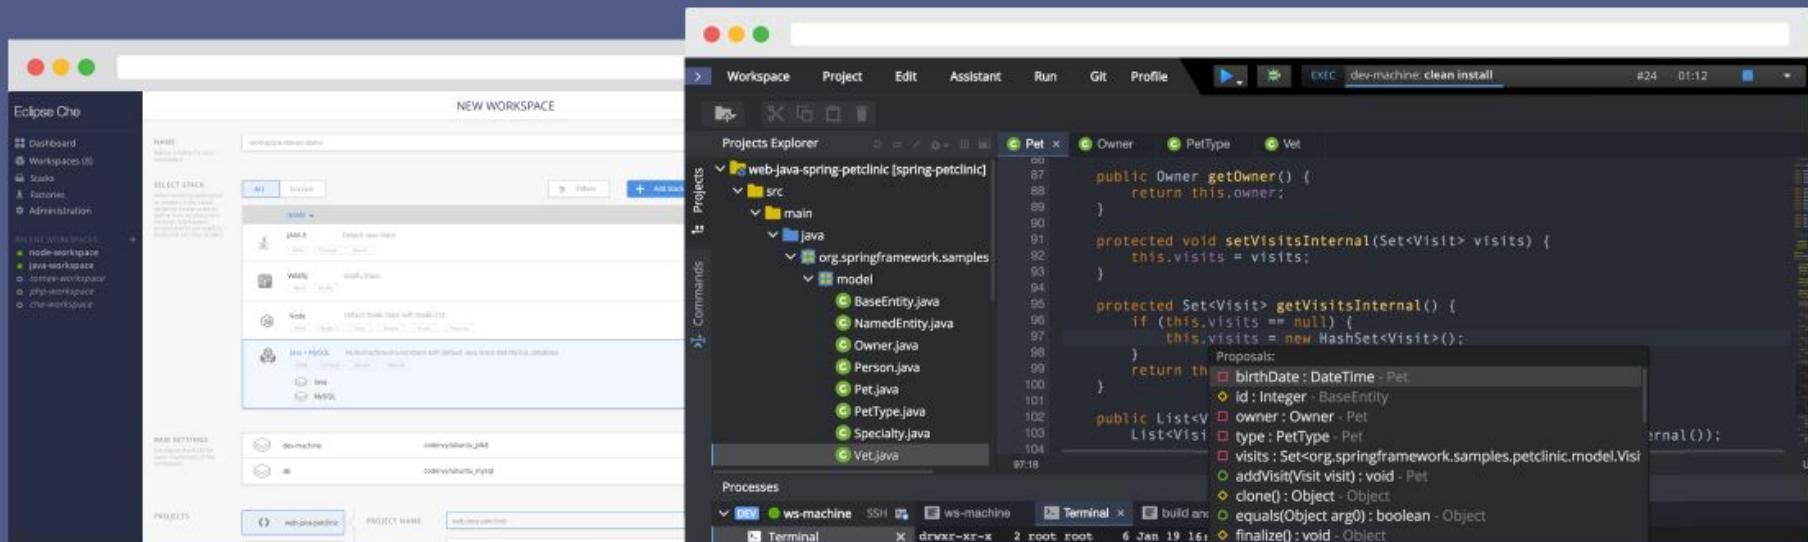

The screenshot shows the Codenvy IDE interface. On the left, the Project Explorer sidebar displays a file tree for a Java project named "web-java-petclinic". The tree includes "che-docs", "src" (containing "main" and "java"), and "model" (containing several Java files: BaseEntity.java, NamedEntity.java, Owner.java, Person.java, Pet.java, PetType.java, Specialty.java, Vet.java, and Vets.java). The "BaseEntity.java" file is currently selected in the editor, and its code is visible on the right. The code defines a class BaseEntity with a setId method and various getters and setters. A mouse cursor is hovering over the "id" field in the setId method. A tooltip labeled "Proposals:" appears, listing several code completion suggestions: id:Integer - BaseEntity, clone(): Object - Object, equals(Object obj): boolean - Object, finalize(): void - Object, getClass(): Class<?> - Object, getID(): Integer - BaseEntity, hashCode(): int - Object, isNew(): boolean - BaseEntity, notify(): void - Object, and notifyAll(): void - Object.

```
01 @MappedSuperclass
02 public class BaseEntity
03     public void setId(Integer id)
04         this.id = id;
05     }
06     public
07         return
08     }
09     public
10         retu
11     }
12     }
13
14
15
16
```

Eclipse Next-Generation IDE

Eclipse Che is a developer workspace server and cloud IDE. [Get Started](#)

Run Eclipse Che now with: `docker run eclipse/che start`

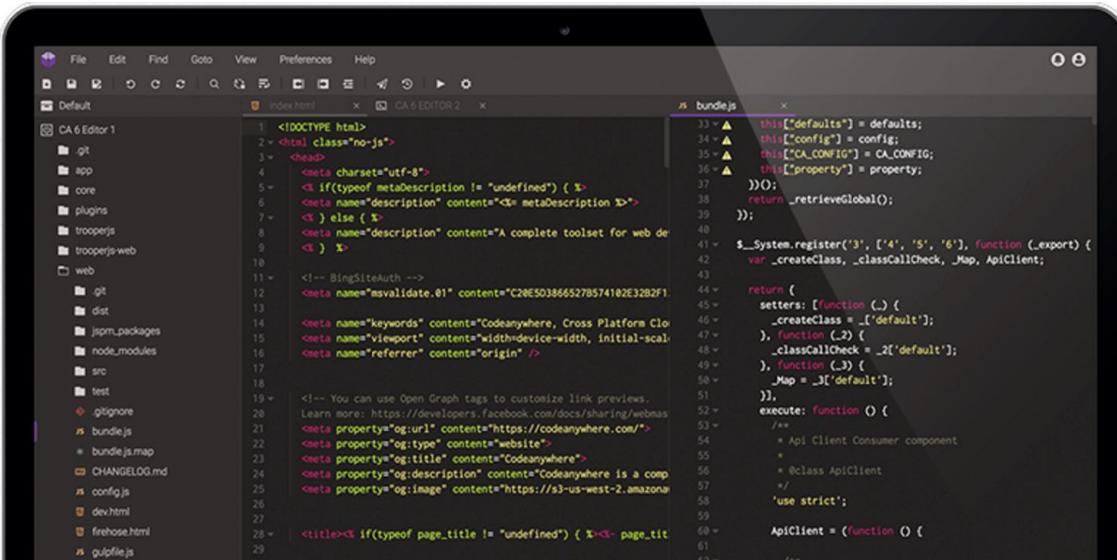

Flawlessly configure dev environments in one click

No matter how complex your project is, Koding for teams makes it easy to share your entire development stack with anyone, anywhere.

```
1 docker_container:  
2   user_data:  
3     sudo apt-get update  
4     sudo apt-get purge -y lxc-docker  
5     sudo apt-get install linux-image-extra-$(uname  
6       sudo apt-get install --force-yes docker-engine  
7     ...

CREATE

The screenshot shows a code editor interface with a dark theme. At the top, there is a menu bar with File, Edit, Find, Goto, View, Preferences, and Help. Below the menu is a toolbar with various icons for file operations like Open, Save, Find, and Print.

The left sidebar displays a file tree under the heading "Default". It includes a "content.php" file, a "Wordpress Environment" connection, and a "wp-content" folder containing "languages", "plugins", and "themes" subfolders. Within "themes", there is a "twentyfifteen" folder containing "css", "genericons", "inc", "js", "languages", "404.php", "archive.php", "author-bio.php", and "comments.php" files.

The main workspace shows an open file named "content.php". The code is a PHP template for a blog post, featuring conditional logic for single posts and loops for multiple posts. The code editor has syntax highlighting for PHP and HTML.

Below the code editor is a terminal window titled "Wordpress Enviror" (partially visible). It displays a list of files in a directory, likely related to the "wp-content/themes/twentyfifteen" folder. The terminal output is as follows:

-rw-rw-r--	1	cabox	www-data	2789	Jan	28	2016	wp-config.php								
drwxrwxr-x	6	cabox	www-data	4096	Mar	17	01:46	wp-content/								
-rw-rw-r--	1	cabox	www-data	3286	May	24	2015	wp-cron.php								
drwxrwxr-x	16	cabox	www-data	4096	Jan	6	2016	wp-includes/								
-rw-rw-r--	1	cabox	www-data	2380	Oct	24	2013	wp-links-opml.php								
-rw-rw-r--	1	cabox	www-data	3316	Nov	5	2015	wp-load.php								
-rw-rw-r--	1	cabox	www-data	33770	Dec	20	2015	wp-login.php								
-rw-rw-r--	1	cabox	www-data	7887	Oct	6	2015	wp-mail.php								
-rw-rw-r--	1	cabox	www-data	13021	Nov	20	2015	wp-settings.php								
-rw-rw-r--	1	cabox	www-data	28594	Oct	30	2015	wp-signup.php								
-rw-rw-r--	1	cabox	www-data	4035	Nov	30	2014	wp-trackback.php								
-rw-rw-r--	1	cabox	www-data	3061	Oct	2	2015	xmlrpc.php								

At the bottom, a command-line prompt shows the user's session: "cabox@box-codeanywhere:~/workspace\$".

The screenshot shows the Cloud9 IDE interface. On the left, there's a code editor window titled "header.php" with the following PHP code:

```
52
53 <body <?php body_class(); ?>>
54 <div id="page" class="hfeed site">
55   <?php if ( get_header_image() ) : ?>
56   <div id="site-header">
57     <a href=<?php echo esc_url( home_url( '/' ) ); ?>" rel="home"
58       <img src=<?php header_image(); ?>" width=<?php echo get_header_image_width(); ?>
59     </a>
60   </div>
61   <?php endif; ?>
62
63   <header id="masthead" class="site-header" role="banner">
64     <div class="header-main">
65       <h1 class="site-title"><a href=<?php echo esc_url( home_url( '/' ) ); ?>></a></h1>
66
67       <div class="search-toggle">
68         <a href="#search-container" class="screen-reader-text">Search</a>
69       </div>
70
71     </div>
72   </header>
73
74   <div id="content" class="site-content">
75     <div class="content-area">
76       <div class="post-area">
77         <div class="post-item">
78           <div class="post-content">
79             <h2>Hello world!</h2>
80           </div>
81         </div>
82       </div>
83     </div>
84   </div>
85
86   <div id="primary-navigation" class="site-navigation">
87     <div class="menu">
88       <ul>
89         <li>Home</li>
90         <li>About</li>
91       </ul>
92     </div>
93   </div>
94
95 </div>
96
97 </body>
```

On the right, there's a browser window titled "[B] https://wordpress" showing the WordPress dashboard with the title "My First Wordpress site" and the subtext "Just another WordPress site". Below the browser window, the code editor shows the output of the "Hello world!" PHP echo statement.

Welcome to the Javascript REPL. This REPL allows you to test any single or multi line  
a browser based javascript environment (iframe). It operates similar to your browser  
> console.log('terminal js');  
terminal js  
undefined  
> alert('popup message');
```

Using PHPMyAdmin with Cloud9

Here we'll explain how to install a PHPMyAdmin instance right in your workspace. Each workspace runs its own database and copy of PHPMyAdmin.

First, create a PHP workspace so you have PHP, MySQL, and Apache installed right away. You can then make sure you have MySQL installed by running:

```
mysql-ctl install
```

Then install phpMyAdmin:

```
phpmyadmin-ctl install
```

After the installation is complete you'll just want to make sure mysql is running once more:

```
mysql-ctl start
```

After installing phpMyAdmin, you were given a link to access PHPMyAdmin which will follow the pattern of: [https://\[workspacename\]-\[username\].c9users.io/phpmyadmin](https://[workspacename]-[username].c9users.io/phpmyadmin). From that link, you can login with your Cloud9 username and a blank password.

```
byroncorrales:~/workspace $ phpmyadmin-ctl install
```

```
Starting installation
```

```
Starting MySQL
```

```
* Starting MySQL database server mysqld  
...done.
```

```
Configuring database
```

```
Starting apache
```

```
* Restarting web server apache2  
...done.
```

PHPMyAdmin Installation complete. You can log in at: <https://wordcampni-byroncorrales.c9users.io/phpmyadmin> with the following username (and blank password):

Username: byroncorrales

The screenshot shows the phpMyAdmin interface with the following details:

- Header:** Shows the URL <https://wordcampni-byroncorrales.c9users.io/phpmyadmin/index.php?token=f301ed3ea1bbca2f531e415249e966>.
- Servers:** Shows "Servidor: 127.0.0.1".
- Navigation:** Shows tabs for "Bases de datos", "SQL", "Estado actual", "Usuarios", "Exportar", "Importar", and "Configuración".
- Left Sidebar:** Shows a tree view of databases and tables, including "c9" (with "Nueva", "wp_commentmeta", "wp_comments", "wp_links", "wp_options", "wp_postmeta", "wp_posts", "wp_termmeta", "wp_terms", "wp_term_relationships", "wp_term_taxonomy", "wp_usermeta", "wp_users", "information_schema", "mysql", "performance_schema").
- General Configuration (Configuraciones generales):**
 - "Cambio de contraseña"
 - "Cotejamiento de la conexión al servidor": utf8_general_ci
- Appearance Configuration (Configuraciones de apariencia):**
 - "Idioma - Language": Español - Spanish
 - "Tema": pmahomme
 - "Tamaño de fuente": 82%
 - "Más configuraciones"

Pricing Guide

Your entire development workflow - all in the cloud

Free
forever

Free public workspaces
One private workspace
Awesome community support

[Get Started](#)

Individual

\$19

per month

All Free features **plus**

Unlimited private workspaces

Unlimited ssh workspaces

3 Hot Workspaces

Increased Performance

Email support

[Upgrade now](#)

Teams

\$29

per user per month

BETA

Unlimited team workspaces

10 Hot Workspaces per user

Centralized Billing

Team management

Email support

[Add this plan](#)

Education

\$1

per teacher per month

Free public workspaces

One private workspace per student

Free unlimited students

Students join without a credit card

A TOMAR EN CUENTA

- Sincronización de archivos desde fuentes externas
- Virtualhost
- Modificar nombre de dominio al enviar deployments.
- Que hacer si el servicio falla.

Instancia de desarrollo

Código Fuente

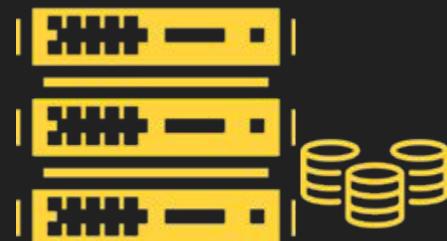

GitHub

Entorno de pruebas /

Assets

Servidor de producción
