AGENDA

Lo que veremos hoy:

- ¿Empezando de cero? Instalando WordPress
- Temas de WordPress
- Creando el mío
- Plugins Necesarios
- WordPress Coding Standards
- Post Types y sus templates
- Un Loop para gobernarlos a todos
- Creando un Custom Post Type y su Taxonomía
- Integrándolos a mi tema
- Custom Fields + WP_Query = :)

¿Empezando de cero?

Welcome to WordPress. Before getting started, we need some information on the database. You will need to know the following items before proceeding.

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

We're going to use this information to create a `wp-config.php` file. If for any reason this automatic file creation doesn't work, don't worry. All this does is fill in the database information to a configuration file. You may also simply open `wp-config-sample.php` in a text editor, fill in your information, and save it as `wp-config.php`. Need more help? [We got it.](#)

In all likelihood, these items were supplied to you by your Web Host. If you do not have this information, then you will need to contact them before you can continue. If you're all ready...

[Let's go!](#)

rainwordpress.dev/wp-admin/install.php?language=en_US

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Site Title Rain Wordpress

Username admin

Usernames can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password o(WRu2OO8XbN7y^&|
Hide

Strong

Important: You will need this password to log in. Please store it in a secure location.

Your E-mail mariod@rain.agency

Double-check your email address before continuing.

Privacy Allow search engines to index this site

Install WordPress

All right, sparky! You've made it through this part of the installation. WordPress can now communicate with your database. If you are ready, time now to...

[Run the install](#)

rainwordpress.dev/wp-admin/install.php?step=2

Success!

WordPress has been installed. Were you expecting more steps? Sorry to disappoint.

A STARTER THEME FOR WORDPRESS

CREATE YOUR UNDERSCORES BASED THEME

RainWordpress

GENERATE

Advanced Options

Based on `_s` from github

Hi. I'm a starter theme called `_s`, or *underscores*, if you like. I'm a theme meant for hacking so don't use me as a Parent Theme. Instead try turning me into the next, most awesome, WordPress

A just right amount of lean, well-commented, modern, HTML5 templates.

A helpful 404 template.

An optional sample custom header implementation in `inc/custom-header.php`

WP CODING STANDARDS

Código sano mantiene colaboraciones sanas

<https://make.wordpress.org/core/handbook/best-practices/coding-standards/php/>

<https://github.com/WordPress-Coding-Standards/WordPress-Coding-Standards/>

The screenshot shows a GitHub repository page for 'WordPress Coding Standards for PHP_CodeSniffer'. At the top, there's a green 'build passing' badge. Below it, the repository name is displayed. A brief description follows: 'This project is a collection of [PHP_CodeSniffer](#) rules (sniffs) to validate code developed for WordPress. It ensures code quality and adherence to coding conventions, especially the official [WordPress Coding Standards](#).'. Under the heading 'Project history', there's a bulleted list of milestones: 'In April 2009 original project from [Urban Giraffe](#) was published.', 'In May 2011 the project was forked on GitHub by [Chris Adams](#).', and 'In April 2012 [XWP](#) started to dedicate resources to the development and currently maintains the project, along with [J.D. Grimes](#) and [Gary Jones](#).'. The 'Installation' section includes instructions for using Composer, with a command-line example: 'composer create-project wp-coding-standards/wpcs:dev-master --no-dev'. The page also lists 'README.md' and a 'build' file.

Géneros

Add new Género

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Description

The description is not prominent by default; however, some themes may show it.
