[Help with IRC](#)

The main content area has a navigation bar with links: Showcase, Themes, Plugins, Mobile, Support, Get Involved, About, Blog, Hosting, Download. The "Download" button is highlighted in orange. A dropdown menu is open over the "Core" link, listing: UI, Accessibility, Plugins, Themes, Support, Polyglots, and Mobile. The "Core" link itself is also highlighted in yellow. To the right of the dropdown, there's a snippet of the Core documentation text: "WordPress is web sof website or blog. We l and priceless at the s". Below this, there's a "Ready to get started?" button and a "Download WordPress 3.4.2" button. At the bottom, a yellow banner states: "WordPress is also available in English and Français."

Core Contributor Handbook

Howdy! This is a rough draft of the handbook for contributing to WordPress.

Work here is still in progress. Indeed, some pages are only outlines, and there are many other topics left to explore. We hope for this guide to come together more fully during the 3.5 development cycle.

Plugin Submission and Promotion

Languages: English • 日本語 • (Add your language)

Introduction

This article goes through the steps for taking a plugin that you have created (see [Writing a Plugin](#)) and getting it distributed widely.

Submitting to the WordPress Plugin Directory

The fastest, easiest and best way to get your plugin out there is to upload your plugin to the [WordPress Plugin Directory](#). Having it there will let you easily push out automatic upgrades to all your users when you find a bug, it will save you worrying about bandwidth and it will give you slick stats about downloads and stuff.

For more details about submitting your plugin to the Directory see the [about page](#) or skip straight to the [plugin submission page](#)

Editing Hardening WordPress (section)

== What is Security? ==

Fundamentally, security "is not" about perfectly secure systems. Such a thing might well be impractical, or impossible to find and/or maintain. A secure server protects the privacy, integrity, and availability of the resources under the server administrator's control.

Qualities of a trusted web host might include:

- * Readily discusses your security concerns and which security features and processes they offer with their hosting.
- * Provides the most recent stable versions of all server software.
- * Provides reliable methods for backup and recovery.

Decide which security you need on your server by determining the software and data that needs to be secured. The rest of this guide will help you with this.

Adoptar una página del codex

<http://make.wordpress.org/docs/2013/04/09/adopt-a-codex-page/>

New post on **Make WordPress Documentation** 

 **Adopt a Codex Page**
by [Siobhan](#)

Want a high impact, low friction way to help out with the WordPress documentation project? Adopt a Page in the Codex!

The Documentation project is rumbling along, with handbooks and code reference underway. But in the meantime, we need to keep the Codex updated. Below is a list of the top 20 most visited narrative pages in the Codex. This does not include the **reference pages**, which I've excluded since we're addressing that problem in a different way.

I'm looking for volunteers to take responsibility for one page of the Codex to be their very own. If you want to be involved with docs, but don't have time to get really involved with the overall project, this is a great way to help out in a big way. The total uniques for these pages in one month is **1,615,139!** If we can make these pages beautiful that'll have a big impact on Codex users.

The pages are:

Name	URL	Page Views	Uniques
Installing	http://codex.wordpress.org/Installing	307562	229754

Foros de soporte

<http://es.forums.wordpress.org/>

The screenshot shows the WordPress.org forums homepage. At the top, there's a navigation bar with links for Showcase, Themes, Plugins, Mobile, Support (which is highlighted in blue), Get Involved, About, Blog, and Hosting. To the right of the navigation is a search bar labeled "Search WordPress.org" with a magnifying glass icon. Below the navigation is a large "WORDPRESS.ORG" logo. On the left, there's a sidebar with a "Forums" link. The main content area has a login form with fields for "username or email" and "password", and buttons for "Log in" (with a "(forgot?) link"), "Register", and a "Download WordPress" button. The main content area shows a topic titled "Add blog excerpts to static home page (4 posts)". A user named "akhawkes" has posted a message about adding blog excerpts to a static home page.

Add blog excerpts to static home page (4 posts)

akhawkes
Member
Posted 21 hours ago #

Hi,
I thought this would be pretty simple.

I would like to add blog excerpts to the front of the home page and still display all the content that is on the page, however I would like to the blog to post above all other content.

Here is a link to the site <http://www.DerekBoyer.com>

I have tried multiple different approaches, taking the page.php file and cloning that and renaming it as a different template and adding different lines of code that I have found in the forums, however nothing seems to work, they display the blog excerpts but not the page content...

Any help or direction is greatly appreciated

Thanks in advance

PHP Code for posts

Just what I needed (1 post)

A very nice way to incorporate PHP code into posts/pages appearing with the text and other non-technical stuff. "[ph]" is better than a big block of code, if a non-technical person is editing.
